Peripheral Artery Disease (PAD) is a chronic circulatory condition. This condition narrows arteries and restricts blood flow and is often a complication of diabetes. This is especially dangerous if you have a wound that is waiting for healing nutrients to arrive via your blood. PAD can also result in uncomfortable symptoms like painful leg cramps, numbness and weakness in your legs, and cold feet. If you notice these signs, it's best to pay us a visit so we can address any underlying issues and help you manage your condition with medications or procedures so that serious complications can be avoided.

Our offices use PADnet, which is the only diagnostic device that can support the identification of peripheral artery disease (PAD). PADnet uses air cuff and PPG probe technology to record Ankle Brachial Index (ABI), Toe-Brachial Index (TBI), Segmental Pressure values and Pulse Volume Recording (PVR) waveforms. This allows us to compare the blood pressure in your ankles with the blood pressure in your arm. If your ABI is abnormal, we may order other tests to determine the extent of your PAD. In addition, PADnet performs venous refill studies. These non-invasive tests help identify vascular disease and provide data to determine suitable medical or surgical treatment plans for PAD.

In the meantime, take care of your heart – and your feet! Don't smoke, and be sure to eat healthy, watch your weight, and exercise. A healthy lifestyle can make a big difference!

If you'd like more information or have questions, just ask! Our caring staff is always happy to help.

Foot and Ankle Care As You Age

Some things become better as we grow older. Other things may require a little more care, or a different type of attention.

Our feet and ankles tend to fall in those categories. When considering foot and ankle care as you age, the main goal is in addressing issues and avoiding problems that may interfere with mobility. Proper care means getting around better!

Here are a few good self-care tips for aging feet and ankles:

- **Keep an Eye on Things** – Regularly examining your feet will help discover irregularities that could be potential problems before they become serious. If something looks or feels out of the ordinary, contact us!
- **Keep Feet Clean and Moisturized** – It's wise to combine these rituals with foot inspections. Use mild soap to clean your feet, followed by a lotion to keep skin from becoming dry and cracked. Do not leave lotion between the toes, however, as this can increase risk of fungal infections.
- **Get Good, Comfortable Shoes** – If you have not had your shoe size measured in a while, have it done by a professional. The shape and size of our feet can change with age, and the shoes that fit a decade ago might be too constricting for you now.

The best advice we can give, however, is to not wait for problems to clear up on their own. If something persists after a few days without improvement—whether it be pain, discoloration, bumps, or other symptoms—give us a call. There is no problem too minor to discuss!

Mark Your Calendars

- September 1** National Tailgating Day – We'll bring the snacks!
- September 5** National Cheese Pizza Day – The type of cheese is up to you.
- September 7** National Food Bank Day – Drop off food items for those in your area.
- September 13** Uncle Sam Day – We want YOU to learn the story of this icon.
- September 16** National Working Parents Day – For tireless moms and dads who provide.
- September 22** Elephant Appreciation Day – How can you not appreciate them?
- September 25** National One-Hit Wonder Day – Play your favorite song by what's-their-name.
- September 29** National Coffee Day – A cup in moderation can be good for you!

Can Small, Frequent Meals Boost Your Energy?

You know the old adage of three square meals a day being the best way to chow down, but there's a case for spreading your meals out over more, smaller installments if you're an athlete.

According to experts at Cleveland Clinic, athletes or people who have physically active schedules may benefit from more frequent "mini-meals" throughout the day. Keeping a steady, more frequent fueling pattern can help athletes maintain steady blood sugar levels, boost their metabolism, and provide a steady flow of nutrients as long as they're up.

Five or six meals per day, starting with breakfast 1-2 hours after waking and eating again every 3-4 hours, is considered a reasonable plan. Each meal should be small to moderate in size. Meals should be high in carbs and moderate in protein and fat.

If you have trouble feeling full during exercise, a meal replacement shake or smoothie might help avoid feeling bloated.

If you don't have as much time during the week, plan on preparing the bulk of your meals over the weekend. Also stock up on non-perishable snacks such as jerky, protein bars, pouched tuna, and nuts. Keep a variety for the full array of nutrition and to add some variety!

Whatever you do, no matter how active you are, don't skip meals. That's a ticket to decreased metabolism and energy every time.

Hot Mulled Cider

Some people can't wait to get into autumn once September hits. If you're one of them, you'll likely fall for a hot mug of mulled apple cider! You can make some right in your slow cooker!

Note: This recipe is non-alcoholic, but you can add a bit of brandy, bourbon, or rum to your taste.

Ingredients

- 1 gallon fresh apple cider (look for the cloudy, refrigerated stuff)
- 1 medium orange
- 1 piece of fresh ginger, 1.5 inches
- 5 cinnamon sticks, 3 inches each
- 1 tbsp. whole cloves

Instructions

- Pour the cider into a slow cooker that can hold more than 5 quarts.
- Cut the orange into quarter-inch rounds and the ginger into quarter-inch thick slices. Add both to the slow cooker.
- Add cinnamon sticks and cloves. For easy removal, place them in a tea ball before adding to the mix.
- Cover the slow cooker and cook 4 hours on LOW, until flavors combine.
- If you want to remove the spices, strain the cider through a fine-mesh strainer or cheesecloth into a large pot.
- Serve in mugs. Garnish with orange slices, if desired.

Back to School for Feet!

The start of a new school year is an exciting time (well, based on who you ask)!

If you have a child who has gone back to school, it might be a good time to update their shoes. Young feet grow fast, and having a well-fitting pair of shoes to last through the day can help prevent pain and fatigue.

When shopping for new shoes for a school-aged child, keep these items in mind:

- **Have Their Shoe Sized Measured Every Time** – Like we said, young feet grow fast. Don't assume that your child's shoe size has remained the same since your last shopping excursion. A trained sales associate should be able to provide you the correct measurements you need.
- **Don't "Buy Ahead"** – While your child's feet may grow quickly, buying shoes a size over what they are currently at is not a good idea. Shoes that are too large and slide around on the foot are just as capable of causing problems as shoes that are too tight.
- **Consider Lighter Shoes to Start** – Although it's September, summer is still technically here (and sometimes doesn't know when to leave). Shoes that are lighter and more breathable can help keep feet cool and reduce sweating until fall is officially here.
- **Does Your Child Have Flat Feet?** If so, a shoe with a roomy toe box, arch support and shock absorption can make a world of difference. If your child wears orthotic inserts, make sure they fit inside the shoe!

Good luck finding the right shoes you all can agree on! If you run into any problems or concerns about your child's feet, never hesitate to let us know. The right attention now can prevent longer lasting problems in the future!
